AMP Awarded PCI Compliance

OLATHE, KS, May 5, 2010 – Applied Measurement Professionals, Inc. (AMP) is proud to announce that we have achieved PCI DSS Compliance status. This achievement highlights AMP's commitment to providing the highest security for all client and candidate data. We process numerous account transactions for many of our client constituents in both our testing and management services divisions, and we take the protection of their data very seriously.

The PCI compliant distinction certifies that we have met more than 400 specific security requirements and passed a comprehensive electronic security scan conducted by an authorized third-party. PCI compliance requires that we maintain a secure network, protect credit cardholder data at every stage of the process, maintain a vulnerability management program, implement strong access control measures, regularly monitor and test our networks and maintain a strict Information Security Policy.

In order to maintain PCI compliance, AMP conducts regular security training for all personnel, continually monitors for electronic intrusion attempts, oversees system configurations and access methods, and maintains defined policies for reporting any potential security breaches. These processes are in addition to AMP's already robust security and disaster recovery procedures protecting the AMP Assessment Center Network, AMP's corporate headquarters in Olathe, KS and LXR Division and back-up data center in Georgetown, SC.

"AMP clients can be confident in our ability to safeguard all private data. AMP's goal has always been to provide the highest quality service in the industry and our security standards are truly a reflection of that goal," states Gary A. Smith, AMP President and Chief Executive Officer. AMP Chief Information Officer Rhett Tindall, added, "Over the past year, AMP staff has analyzed all company policies and procedures to ensure we are doing everything we can to protect candidate and member data. The bottom line is that we are dead serious when it comes to security."

The Payment Card Industry (PCI) Security Standards are technical and operational requirements set by the Payment Card Industry Security Standards Council to protect cardholder data. PCI compliance is managed and enforced by the PCI Security Standards Council, and its executive committee consisting of the major payment brands. The PCI Data Security Standard (DSS) distinction applies to businesses that accept or process credit cards and is aimed at protecting cardholder data.
